

MEASURING FOR WALL MURAL

RECOMMENDED TOOLS

Measurement
tape

Pencil

Paper sheet

PREPARATION

Step 1. Height measurement.

Measure both sides of the wall to determine the tallest measurement. Write down the higher number.

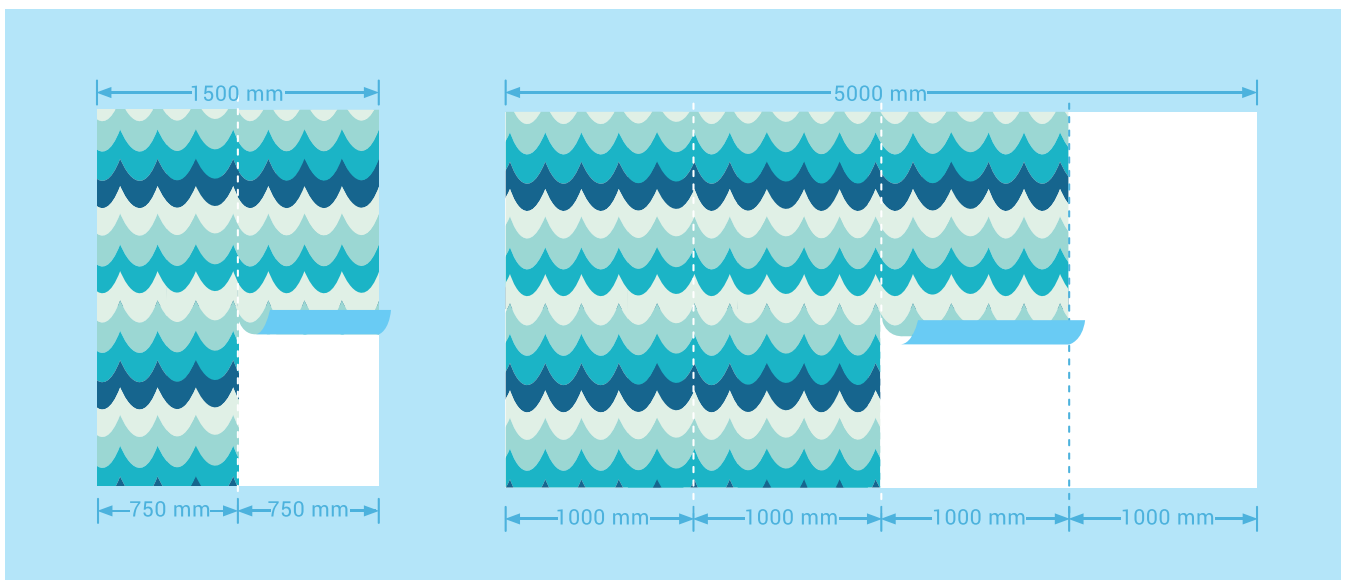

Step 2. Width measurement.

Measure the horizontal distance from corner to corner.

Note:

We create all custom size products based on the specific dimensions that you provide us with your order. However, if you prefer, you may choose to add an extra 2-3 cm to the height and width to allow for slightly uneven wall dimensions.

HOW WIDE ARE OUR WALL MURAL ROLLS?

We divide our murals in equal parts.

We divide our murals into equal parts. For example:

if your image is 1500mm width, we divide it in two panels of 750mm each in width. If you have larger walls and you need bigger image, for instance, 5000mm, so we would divide it into five panels of 1000mm each in width.

Maximum wall mural panel width – 1200mm.
